FOR AUTHORS

Aims and Scope of AJOB Neuroscience

AJOB Neuroscience and ajobneuroscience.com provide a comprehensive resource for scholars, practitioners, and others interested in ethics and the brain sciences. We interpret the scope of the field broadly, and seek wide-ranging contributions exploring the ethical, social and legal dimensions of neuroscience.

Our goal is to inspire and inform research and writing across disciplines through target articles, peer commentary, book reviews, qualitative research, and other innovative formats.

General Information

AJOB Neuroscience is a peer-reviewed journal. The Journal does not charge publication fees or pay authors for manuscripts.

Authors of accepted articles will be asked to sign a Transfer of Copyright form transferring copyright of the article to the publisher, or retaining said copyright, under certain circumstances.

The Taylor and Francis Group and AJOB Neuroscience accept no responsibility for the statements and opinions expressed by authors.

Policies

AJOB Neuroscience is committed to ensuring the scholarly and scientific integrity of all research and conceptual analyses submitted for publication. The Journal's operations are governed by Taylor and Francis’s Code of Publishing Ethics and informed by the work of the Committee on Publication Ethics, also known as COPE, of which the publisher is a member, and the International Committee of Medical Journal Editors also known as ICJME.

Responsibilities of Authors

Manuscripts submitted for publication must consist entirely of original material and should not be submitted or under consideration for publication elsewhere in any form.

Each author should have participated sufficiently in the work to take public responsibility for the content of the submitted manuscript or published paper, with authorship credit based on substantial contributions to the work, including: conception or design; drafting the article or revising it critically for important intellectual content; and final approval of the version to be published.

Members of the Editorial Board or Staff are welcome to submit manuscripts for publication, but are not permitted to be involved in any discussions, reviews, or decisions related to their submissions.
Authors are expected to adhere to Taylor & Francis’ Ethical Guidelines for Authors. For further guidance, authors should consult the ICJME’s statement on defining the roles and responsibilities of authors and contributors.

**Responsibilities of Peer Reviewers**

Individuals accepting the invitation to serve as peer reviewers are expected to provide timely, confidential, unbiased, constructive, and substantive evaluations of the manuscript. Reviewers should declare any potential conflict of interest prior to agreeing to review a manuscript, including any relationship with the author that may potentially bias their review. Reviewers should notify editors of any significant similarities between the manuscript under consideration and any published paper or submitted manuscripts of which they are aware to prevent problems associated with duplicate or overlapping publication of articles that report closely related data.

All peer reviewers are expected to adhere to Taylor & Francis’ Ethical Guidelines for Peer Reviewers. For further guidance, reviewers also should consult the COPE Ethical Guidelines for Peer Reviewers.

**Responsibilities of Editors**

Editors are responsible for ensuring a timely, confidential, unbiased, and substantive review of manuscripts submitted for publication. Editorial decisions should be informed by the recommendations of the peer reviewers and based on the quality and strength of the research and its fit with the mission of the Journal.

Editors are expected to adhere to the COPE Ethical Guidelines for Journal Editors.

**Conflict of Interest**

A conflict of interest exists when an author, reviewer, or editor has financial or personal relationships that may inappropriately influence (bias) his or her actions (such relationships are also known as dual commitments, competing interests, or competing loyalties). Disclosure of relationships that may present a conflict of interest is necessary to preserve trust in the scientific process and the credibility of published research.

All authors, reviewers, and editors are required to disclose all financial or other material, professional, scholarly, or personal relationships involving the information presented, subject matter discussed in a manuscript, or with the authors whose work is being reviewed. This includes any affiliation, financial or otherwise, that could appear to influence decisions and actions associated with the design, conduct, interpretation, evaluation, and publication of the research. This policy applies to all articles, commentaries, reviews, and editorials. All conflicts of interest occurring in the 3 years prior to the submission or from the beginning of the project, whichever is greater, should be reported.

Examples of such relationships include, but are not limited to:

- Financial: employment; consultancies; honoraria; research funding; equipment, travel, administrative, or writing support; stock ownership; and paid expert testimony
• Non-financial: institutional, professional, or personal affiliations; unpaid management, decision-making, or volunteer positions with relevant organizations

Authors
All such potential conflicts of interest must be declared at the times of submission and publication of the manuscript. A statement of potential conflicts of interest should appear in the cover letter accompanying the manuscript. If authors have no such potential conflicts to declare, they should state so explicitly to prevent ambiguity. Prior to publication, each author must complete and sign a conflict of interest disclosure form; failure to do so will prevent publication of the manuscript.

Prior to peer review, the Managing Editor and the Editor-in-Chief will review all declared conflicts of interest and disclose them to the Associate Editors and reviewers as appropriate (e.g., when doing so would not unblind review of the manuscript). All reported disclosures will be printed alongside each article in the online and print editions of AJOB Neuroscience The Journal reserves the right to decline review and/or publication of work that is found to present a significant conflict of interest (e.g., one that seriously biases the design, conduct, interpretation, and/or evaluation of the research).

Reviewers
Reviewers must disclose to editors any relationship(s) that could appear to inappropriately influence their evaluations of the manuscript. If the Editors determine that a conflict of interest exists, reviewers will be required to recuse themselves. Agreement to review a manuscript, as stated in the Invitation to Review, indicates acknowledgment and acceptance of these guidelines.

Editors
Editors and staff involved in reviewing a manuscript or making decisions on it must have no personal, professional, or financial conflicts of interest with respect to the areas under discussion in the manuscript. The Managing Editor will screen submitted manuscripts, and editorial responsibilities will be assigned so as to avoid potential conflicts of interest.

Research Ethics Policy
Generally, AJOB Empirical Bioethics is the best fit for empirically-based manuscripts. However, AJOB Neuroscience does occasionally accept empirical work. If submitting empirical work, please see guidelines below.

To ensure that the rights, interests, and well-being of human participants are protected, and animals are treated in a humane manner, the Journal requires compliance with the following:

1. Authors must follow national and international guidelines that govern the ethics of experimentation on humans and animals. Research reported in the paper must be conducted in an ethical and responsible manner, in full compliance with all relevant codes of experimentation and legislation. The manuscript should mention the relevant codes and/or regulations that apply to the research. Any waivers of and/or deviations
from these codes and/or regulations must be important to the research, justified in a
cover letter accompanying the submitted manuscript, and discussed in the manuscript
itself.

2. All papers which report in vivo experiments or research on humans or animals must
include a written statement in the Methods section that such work was conducted with
the formal approval of the local human subject or animal care committees, and that
clinical trials have been registered as legislation requires. If approval by an institutional
review board (IRB) or similar body was not required or the IRB granted an exemption,
authors should provide a statement to this effect.

3. Authors must obtain informed consent from all participants, absent a waiver of consent
approved by the responsible IRB or similar body, as required by the relevant regulations
and codes and include a statement in the Methods section documenting the process.
Informed consent should be documented (unless waived) and archived by the
investigator, as dictated by the relevant codes and/or regulations.

4. Authors are encouraged to include a statement about other safeguards that were
included in the research, when appropriate, such as the protection of participant
confidentiality, training and qualification of investigators, use of a data monitoring
board, and so forth.

For further guidance, authors should consult the ICJME’s statement on the protection of
research participants here.

Submission Guidelines

AJOB Neuroscience receives all manuscript submissions electronically via the Manuscript Central
website located at http://editorial.bioethics.net. Manuscript Central allows for rapid and easy
submission of original and revised manuscripts as well as reviewing and internal
communication between authors, editors and reviewers via a web-based platform.

Please read the guide for ScholarOne authors before making a submission. Complete guidelines
for preparing and submitting your manuscript to this journal are provided below.

Please note that AJOB Neuroscience uses CrossCheck™ software to screen papers for unoriginal
material. By submitting your paper to AJOB Neuroscience you are agreeing to any necessary
originality checks your paper may have to undergo during the peer review and production
processes.

AJOB Neuroscience receives all manuscript submissions electronically via their ScholarOne
Manuscripts website located at: http://mc.manuscriptcentral.com/neuroscience. ScholarOne
Manuscripts allows for rapid submission of original and revised manuscripts, as well as
facilitating the review process and internal communication between authors, editors and
reviewers via a web-based platform.

For ScholarOne Manuscripts technical support, you may contact them by e-mail or phone
support via http://scholarone.com/services/support/. If you have any other requests please
contact the journal at neuroeditor@bioethics.net.
The ScholarOne Manuscripts sites for all *The American Journal of Bioethics* publications can be accessed at the following link: [http://mc.manuscriptcentral.com/AJOB](http://mc.manuscriptcentral.com/AJOB).

The condition of the manuscript affects the speed and the quality of the reviews. The manuscript should be prepared and submitted in accordance with the guidelines outlined in this document.

Separate files should be prepared and uploaded for each component of the submission: cover letter; title page; text of the article (include all sections of the manuscript, such as references, in the same file); each individual figure or table; and each supporting document, including permissions needed to reproduce published material or to use illustrations of identifiable subjects.

**Cover letter**

The cover letter, signed by the corresponding author, must contain the statement that the manuscript has been "read and approved by all authors." Each author should have participated sufficiently in the work to take public responsibility for the content, with authorship credit based only on substantial contributions to: conception and design, or drafting the article or revising it critically for important intellectual content; and final approval of the version to be published. All these conditions must be met.

The cover letter should mention any additional information that may be helpful to the editors, including:

- Relevance of article for readers of * AJOB Neuroscience* as it related to the scope and aims of the Journal
- **Potential peer reviewers:** To ensure a timely and thorough review, authors should include a list of at least 3 experts in the field who can review the manuscript without conflict. Such a list should contain: reviewer's name, title, affiliation, current email address; rationale for why this individual would be a good peer reviewer for this manuscript; and a statement that "the authors know of no conflict of interest, either positive or negative, that would influence this individual's review." Authors may also list potential reviewers whom they believe would likely provide a negative review due to conflicts of interest.

**Title page**

The title page should include the names, addresses, and affiliations for all authors.

**Manuscript Specifications**

**Target Article Guidelines**

Manuscripts may not exceed 7500 words in length. All parts of the manuscript should be typewritten, double-spaced, with margins of at least one inch on all sides. Throughout the paper, please number manuscript pages consecutively. The title page should include the name, address, and professional affiliation of all authors. Authors should also supply a shortened version of the title suitable for the running head, not exceeding 50 character spaces. Each article should be summarized in an abstract of not more than 150 words. Avoid abbreviations,
diagrams, and reference to the text in the abstract. Six keywords should also be included for indexing purposes. As an author, you are required to secure permission if you want to reproduce any figure, table, or extract from the text of another source. This applies to direct reproduction as well as "derivative reproduction" (where you have created a new figure or table which derives substantially from a copyrighted source).

Each manuscript must be accompanied by a statement that it has not been published elsewhere and that it has not been submitted simultaneously for publication elsewhere. Authors are responsible for obtaining permission to reproduce copyrighted material from other sources and are required to sign an agreement for the transfer of copyright to the publisher. All accepted manuscripts, artwork, and photographs become the property of the publisher.

Open Peer Commentary Guidelines
Commentaries should not exceed 1,500 words, including references. Spelling, capitalization, and punctuation should be consistent within each article and commentary and should follow the style recommended in the latest edition of The Chicago Manual of Style (The University of Chicago Press, latest ed. 1993). It may be helpful to examine a recent issue of AJOB Neuroscience.

All submissions must include an indexable title, followed by the authors’ names in the form preferred for publication, full institutional addresses, and electronic mail addresses. In addition to your Open Peer Commentary and contact information, you should include a short bio (3-4 lines in length), which will be published in the “Contributors” section of the journal. The bio should include your affiliation, your research interests, and any major publications.

Illustrations: Tables and figures (i.e., photographs, graphs, charts, or other artwork) should be numbered consecutively. Every table should have a title; every figure, a caption. At least one reference in the text must indicate the appropriate locations.

Notes and Quotations
Avoid extracts, tables, and paragraphs in notes. Quotations of more than two lines should be set off in a separate paragraph with double indentation. Quotations of less than two lines may remain in the main body of the text, placed within double quotation marks. All extract citations must include page numbers.

Illustrations
Illustrations submitted (line drawings, halftones, photos, photomicrographs, etc.) should be clean originals or digital files. Digital files are recommended for highest quality reproduction and should follow these guidelines:
- 300 dpi or higher
- Sized to fit on journal page
- EPS, TIFF, or PSD format only
- Submitted as separate files, not embedded in text files

Tables and Figures
Tables and figures (illustrations) should not be embedded in the text, but should be included as separate sheets or files. A short descriptive title should appear above each table with a clear legend and any footnotes suitably identified below. All units must be included. Figures should be completely labeled, taking into account necessary size reduction. Captions should be typed, double-spaced, and on a separate sheet.

**Publishing Ethics**
The Editor and Taylor & Francis Group are committed to the highest academic, professional, legal, and ethical standards in publishing work in this journal. To this end, we have adopted a set of guidelines, to which all submitting authors are expected to adhere, to assure integrity and ethical publishing for authors, reviewers, and editors.

Taylor & Francis is a member of the Committee of Publications Ethics (COPE). COPE aims to provide a forum for publishers and editors of scientific journals to discuss issues relating to the integrity of their work, including conflicts of interest, falsification and fabrication of data, plagiarism, unethical experimentation, inadequate subject consent, and authorship disputes. For more information on COPE please visit [http://publicationethics.org](http://publicationethics.org).

**References**
The authors are responsible for the accuracy and thoroughness of citations. References cited must follow the guidelines of the author-date system. If further detail is needed on citation or reference list formatting, please consult chapters 15-17 of the Chicago Manual of Style 16th edition.

**In-text citations:** The author's last name and the year of publication (with no punctuation between them) is enclosed in parentheses and placed inside the final sentence punctuation (e.g., “(Feingold 1995).”)

When citing specific pages or sections of a work, that specification follows the year of publication, preceded by a comma: (Kimura and Hampson 1994, 58)

For works with more than three authors, et al. should be used, and lowercase letters differentiate separate works by the same author written in the same year: (Curlee et al. 1994) (Anderson 1994a, 1994b)

Multiple citations should be arranged first alphabetically, then chronologically if necessary to differentiate works by the same author, with works separated by semicolons: (Anderson 1994; Feingold 1995; Kimura and Hampson 1994).

**Works Cited**
A corresponding list of works cited should appear at the end of the article. Please abbreviate first name and spell out the last name for authors. Use headline capitalization for titles of
journals and sentence capitalization for titles of books, journal articles, and chapters. *Please do not abbreviate the names of journals.*

Some examples of common citation formats are provided:

**Journals**

*Single author, journal:*

*Two authors, journal:*

*Up to six authors, journal:*

*More than six authors, journal:*

**Books**

*Single author, book:*

*Chapter in edited collection:*

Papers published in conference proceedings are treated like chapters in books.

**Newspaper articles**
(include URL and access date for online versions):
Web sources

Proofs

Page proofs are sent to the designated author using Taylor & Francis' eProof system. They must be carefully checked and returned within 48 hours of receipt.

Offprints/Reprints

Authors for whom we receive a valid email address will be provided an opportunity to purchase reprints of individual articles, or copies of the complete print issue. These authors will also be given complimentary access to their final article on Taylor & Francis Online.

AJOB Regulations and Copyright

AJOB, AJOB Neuroscience and AJOB Empirical Bioethics are refereed journals and articles are accepted on a non-remunerative basis. Submitted manuscripts must wholly comprise original material and are reviewed with the explicit understanding that their essential substance or contents have not been nor will be submitted for publication elsewhere in any form, unless and until such time as AJOB rejects said material. The Taylor & Francis Group and The American Journal of Bioethics family accept no responsibility for the statements and opinions expressed by contributors. Because of rapid advances in the medical sciences, and the scope and nature of peer review and peer commentary in AJOB Neuroscience, no clinical use of AJOB Neuroscience should be attempted. Discussions, views, and recommendations as to medical procedures, choice of drugs, and drug use are the responsibility of the authors. The names The American Journal of Bioethics and AJOB are copyrighted (c) 2010 Taylor & Francis Group.

Open Access

Taylor & Francis Open Select provides authors or their research sponsors and funders with the option of paying a publishing fee and thereby making an article fully and permanently available for free online access - open access - immediately on publication to anyone, anywhere, at any time. This option is made available once an article has been accepted in peer review. Full details of our Open Access program can be found here.

Questions? Please don’t hesitate to contact us.

Authors wishing to discuss manuscript ideas are encouraged to write to the AJOB Neuroscience Editorial Office at neuroeditor@bioethics.net.
